For the right beginning

TROYA SEEDS, a member of ANDIFLI YATIRIM GROUP in the vegetable breeding & research, was established in 2013 on 7 ha of farm in Kurşunlu area of Antalya. Prior 40 years of dedication, experience and knowledge in seed industry with a wide network of national and international relations guided our young and dynamic technical team.

TROYA SEEDS is engaged in hybrid vegetable seed breeding and production with its modern greenhouses, humidity and temperature controlled warehouses, laboratories equipped with the latest technology, biological testing units, seed production & processing units, software for evaluating data during breeding stages with AI and many other research and development equipment.

TROYA SEEDS has prioritised tomato, pepper, eggplant, melon and watermelon species and sub-species in its breeding programmes.

TROYA SEEDS, with its highly specialised and experienced research and development staff, already released a considerable number of vegetable varieties all around world, which it continues to breed in its own facilities, to the stage of product development and marketing both in our country and in other countries.

TROYA SEEDS is also business partner of some international seed companies in various countries. TROYA SEEDS also has various seed brands such as Altair, Aladdin and Assil Seeds also dealing with bulk business with other brands.
